Allowable Subject Matter

Sasano et al. (US 6,807,017) teaches an optical system having an objective lens that is tilted for correcting a third order coma aberration. Sansano takes into account that the third-order coma aberration is generated due to errors during manufacturing of the lens.

Furuhata et al. (US 2004/0070848) disclose a method of manufacturing an optical pickup, where an objective lens is tilted in a predetermined amount during assembly so that coma aberration becomes null.

Furthermore, both Nagashima et al. (US 6,304,526) and Yanagawa (US 2002/0071365) teach an optical pickup head capable of tilting the objective lens for correcting aberration caused by tilt of optical recording medium.

However, none of the reference cited above, nor any reference of record alone or in combination disclose or suggest an optical head is assembled so that **a direction of the coma aberration of the objective lens itself perpendicularly crosses a direction tilted by the objective lens tiling mechanism.**

Accordingly, claims 1-32 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lixi Chow whose telephone number is 571-272-7571. The examiner can normally be reached on Mon-Fri, 8:30am to 6:00pm.
